

Estate Gate

Residential Elevator Gates

Distributed through Southeast Elevator and its divisions

The Gate Your Home Elevator Deserves

Most elevator gates are functional. Estate Gate is better by design.

Estate Gate residential elevator cab gates combine modern aesthetics with precision engineering — giving homeowners, builders, and architects a gate that looks modern and performs reliably for the life of the elevator.

Why Estate Gate

- Sliding panel design fully complies with the 3/4" x 4" rule
- Anodized aluminum frames built for durability
- Patented Compact Panel Support System
- Available in nine standard panel finishes — custom finishes on request
- Designed specifically for residential elevators

Available finishes: Black · White · Clear Acrylic · Frosted Acrylic · Smoked Acrylic · Unfinished Oak · Unfinished Maple · Carbon Fiber Veneer · Brushed Aluminum

Add an Automatic Gate Operator

Every Estate Gate is compatible with an automatic gate operator — and an automatic gate operator can be added to any Estate Gate installation.

The operator opens and closes the gate automatically each time the elevator arrives at a landing. No manual sliding. No gates left open. No service calls.

- Eliminates the #1 cause of elevator stoppages: an open gate
- Supports aging-in-place and multi-generational households
- Operates quietly and reliably
- Adds perceived value in luxury and custom builds

For architects and builders: plan for it in the specification phase. For homeowners: ask for it from the start. It adds minimal cost and significant long-term benefit.
